

Application For UW Science Network (UWSN) Access

Contact Information for Principal Investigator

Name: _____

Email Address: _____

Phone Number: _____

Name of Project: _____

Before completing this request please read the UWSN overview web site at: <https://arcc.uwyo.edu/guides/uw-science-dmz>

Please attach a detailed science use case for why your need for access to the UWSN is. Be sure to include how having such access to big data outside the UW campus will help your research.

What existing equipment do you want to attach to the UWSN, is this a workstation, server, lab equipment?

(Note: In order to make the best use of the high speeds provided by the UWSN it is suggested that before purchase of new, or use of existing, equipment the project contact the Advanced Research Computing Center (ARCC) for assistance in specification of hardware that can make the best use of the UWSN)

Please list the building(s) and rooms is the equipment located in:

The NSF Grant that funded UWSN will bear all costs associated with network hardware, switches, routers for the requested connection. There is a small pool of funds for new network cabling available for those locations where the cable plant cannot today support speeds of at least 1 gigabit/sec and no other funding exists. After this funding pool is exhausted the researcher/project making this request will bear the cost of any new cable that needs to be installed.

To help support the security of systems connected to the UWSN they may be scanned by the IT Network Security team on occasion to check for misconfigurations and known exploits of various operating systems. If a problem is found it will be reported to the research team so that configuration changes or patches can be applied in a timely manner.

By signing this request I agree that I and members of my project will abide by the Acceptable Use Policy for the UWSN <https://arcc.uwyo.edu/guides/DMZAUP> and that once a year in July for the duration of this project will provide to the UWSN Steering Committee a 1 page report describing how over the past year access to the UWSN has benefited the project and the uses that have been made of it.
